

## 20 facts on Living with lupus in 2020

Some key findings – not all of which are in our Lupus Science and medicine publication

http://dx.doi.org/10.1136/lupus-2020-000469

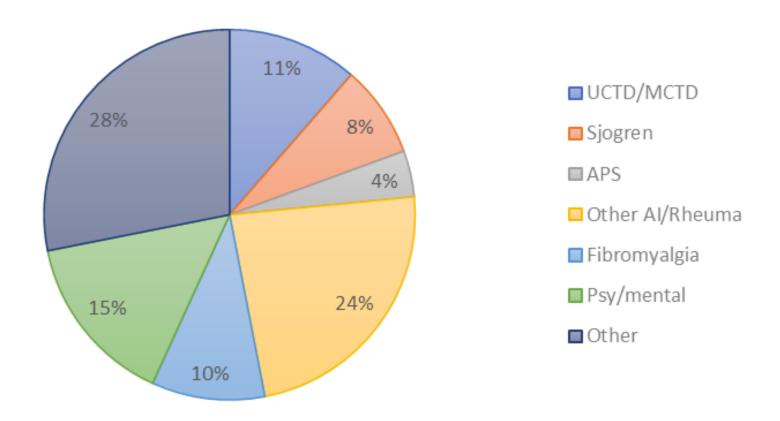

Median time to diagnosis is 2 years

When prior diagnosis of fibromyalgia, median time to diagnosis increases to 7 years When kidney involvement, median time to diagnosis drops to 1 year

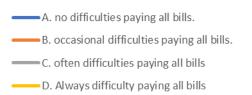

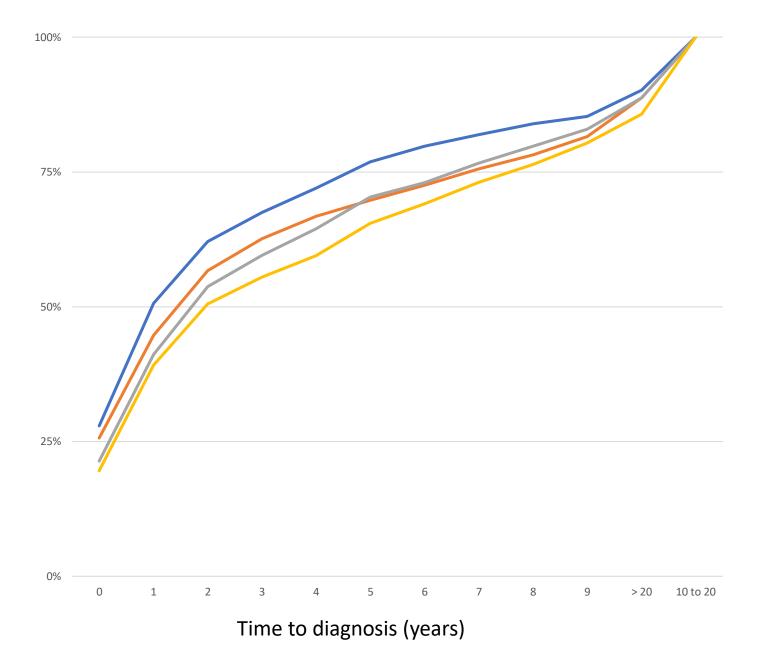

45% of SLE patients have first received another diagnosis

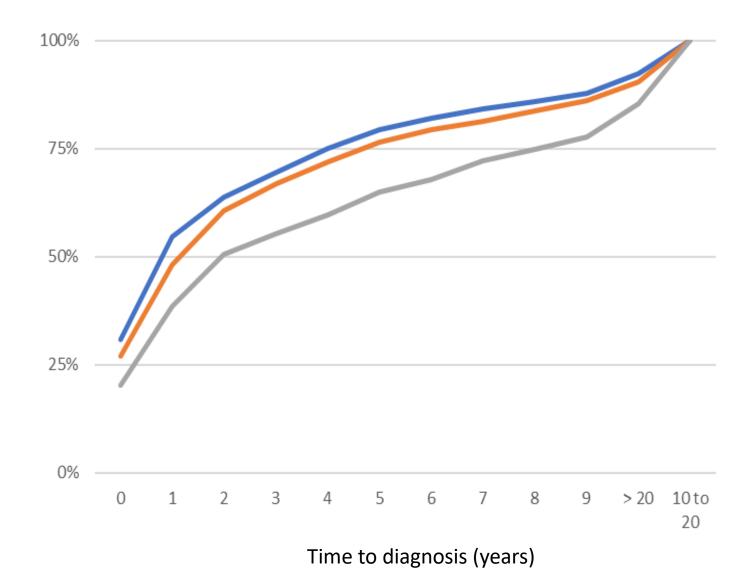

Time to diagnosis is significantly influenced by economic status

Time to diagnosis is significantly reduced by access to an experienced lupus doctor

Do you have access to an experienced lupus doctor?

——A. Strongly agree

B. Agree

C. Neutral/Negative

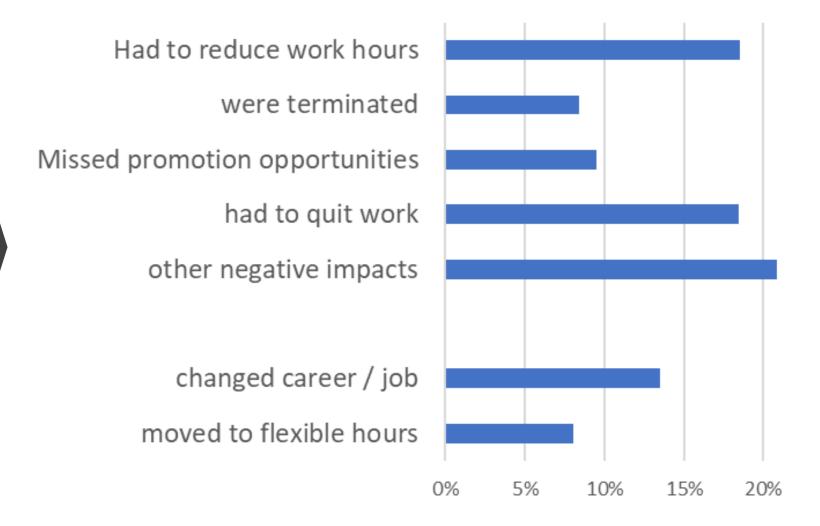

## Lupus impacts studies: 48.2% of patients below 25 and 68.1% of childhood onset lupus patients said it affected their studies

	Patients < 25 years (n=1492)	Childhood onset (n=244)
Could not study what they wanted	18.8%	29.1%
Needed special arrangements	13.7%	22.9%
Other negative effect(s)	22.5%	29.1%
Positive effect	2.5%	2.9%
Chose a more relevant study field	6.0%	11.9%

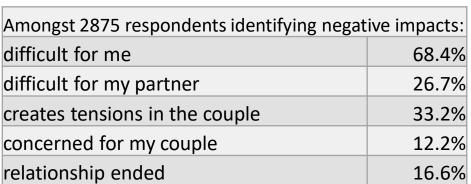

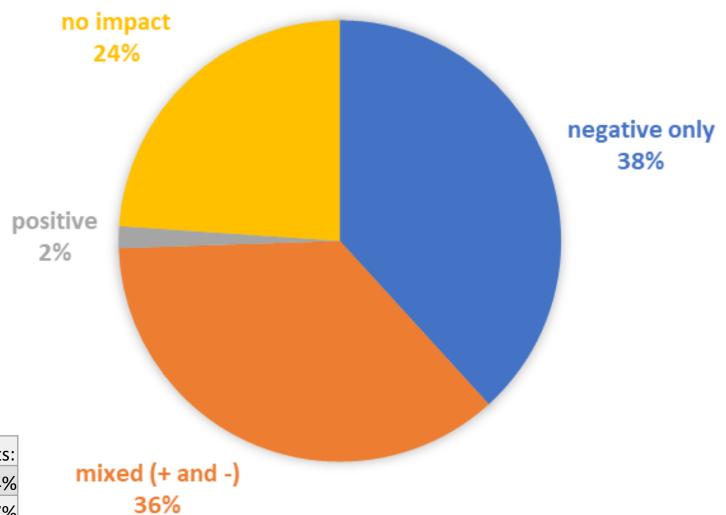

Lupus impacts careers: 57.9% identified impact as negative, 1.8% as positive

# Lupus impacts couple life for 3 out of 4

### Lupus flares worsen impact on couple lives

Lupus under control past 3 months	Total answers	Negative impact (n)	Negative impact %
No	1181	579	49.0%
Yes	3018	1027	34.0%

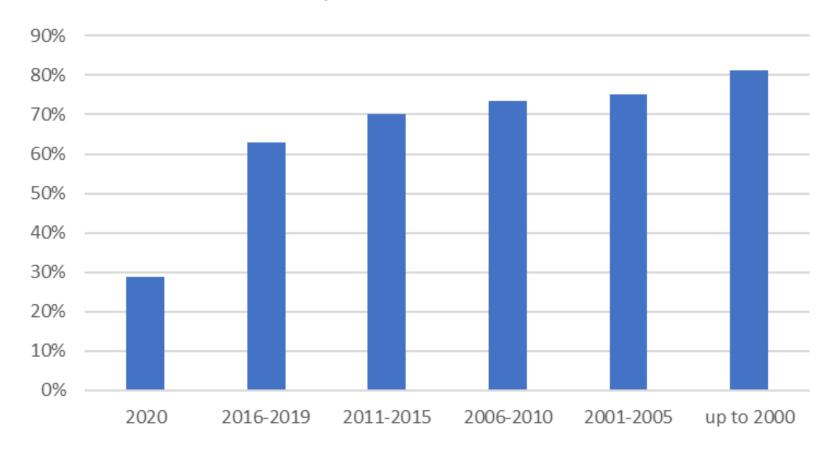

Patients whose lupus has not been under control over past 3 months report substantially more negative impact on their emotional or sexual life

#### % under control

71.7% say their lupus has been under control over the past 3 months

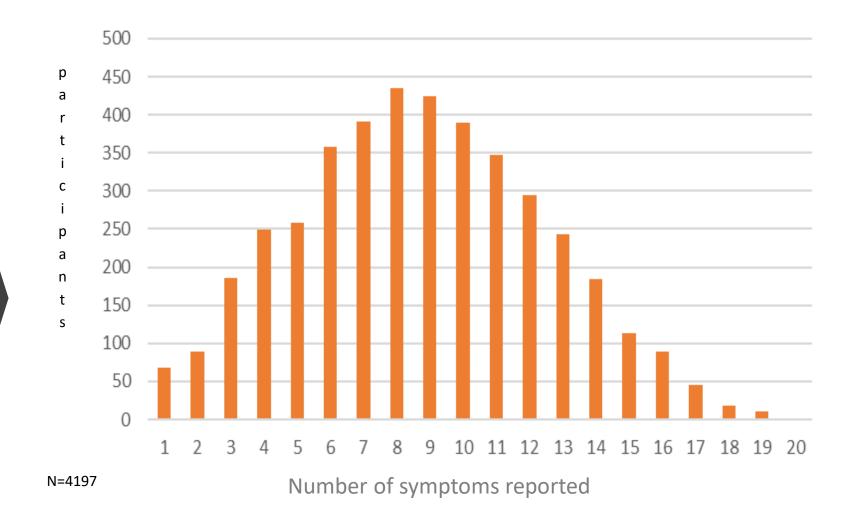

Diagnosis year

(N=4228)

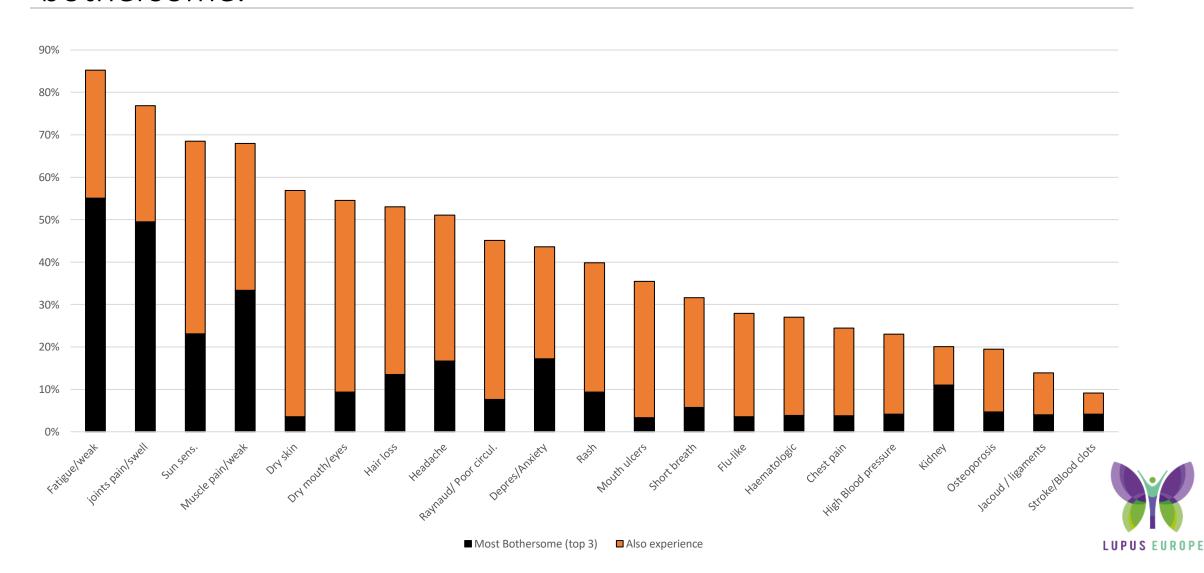

Median number of symptoms regularly experienced is 9 from a list of 21 possible features

Heterogeneity: 4197 respondents => 3313 different combination of symptoms!

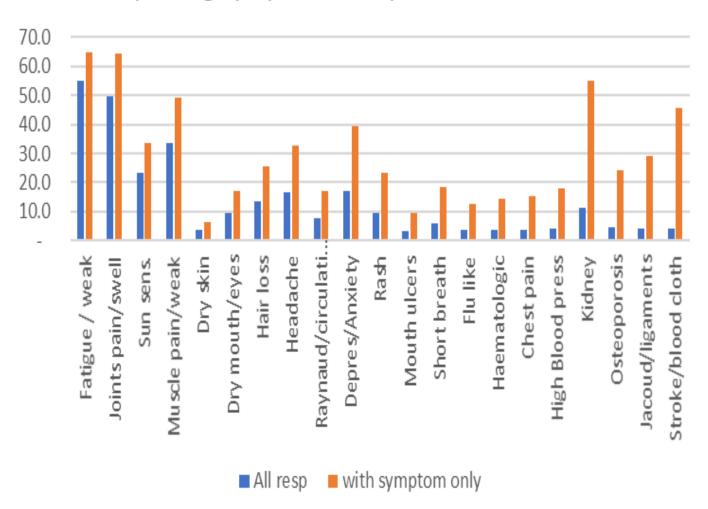

Fatigue, joint pain and sun sensitivity are the most experienced symptoms. Fatigue, joint pain and muscle pain/weakness, the most bothersome.

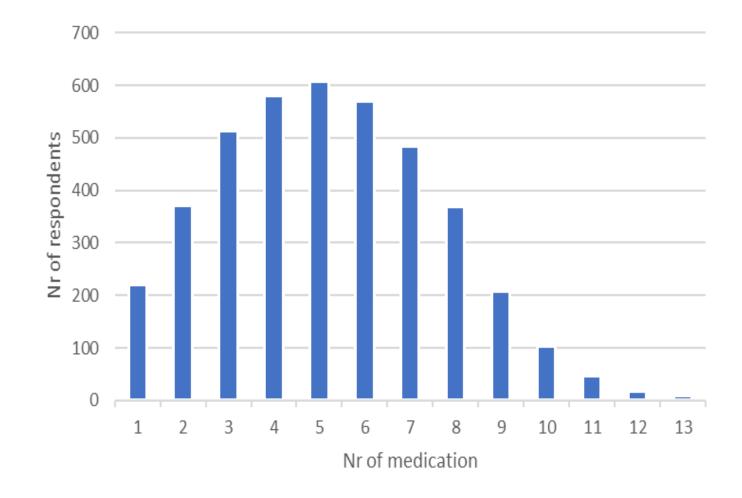

For those affected, kidney issue, stroke/blood cloth or depression are very significant issues

#### % reporting symptom as Top 3 most bothersome

People living with lupus take on average 5 different medications for their lupus

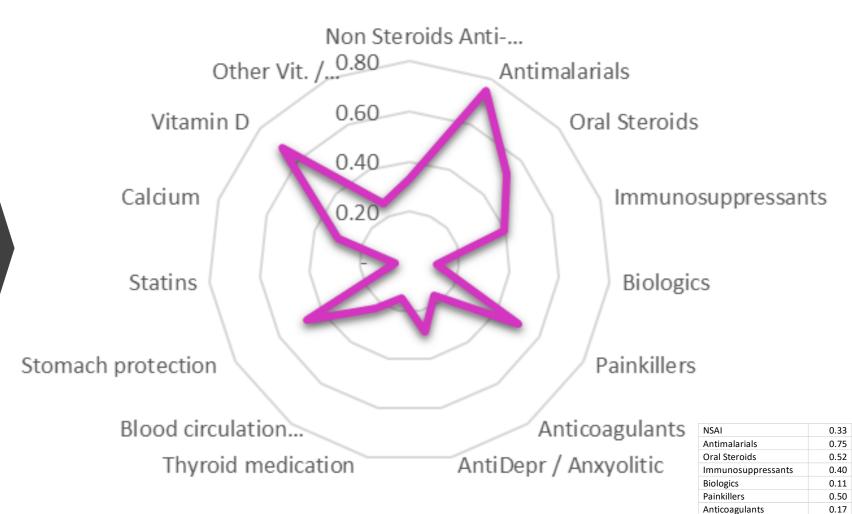

Even when lupus is "under control"
Patients take 5+ medications

	Lupus "under control"	Lupus "NOT under control"
Average number of medications	5.06	5.59 (p<0.0001)
Take corticosteroids	47.6%	53.7%
Take immunosuppressants	35.7%	41.9%
Note: Fibromyalgia diagnosis	4.15%	10.5%

Reported medication regularly taken (n=4099)

AntiDepr / Anxyolitic

Blood circulation and hea

Other Vit. / complements

Thyroid medication

Stomach protection

Statins Calcium

Vitamin D

One out of 2
lupus patients
faces depression
or anxiety, but it
is under treated
(1)

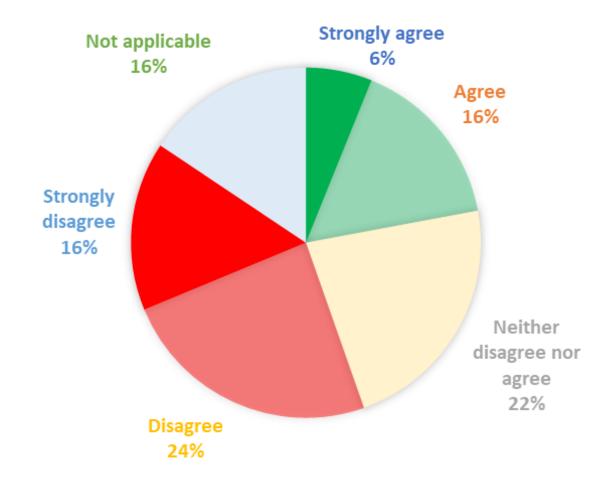

#### Face depression / anxiety vs. take medication for it:

Depression /Anxiety is:	total (n)	medicated	% medicated
1st most bothersome symptom	166	77	46%
2nd most bothersome	254	120	47%
3rd most bothersome	263	118	45%
Also faced regularly	1148	414	36%
Not a regular symptom	2366	228	10%
TOTAL	4197	957	23%

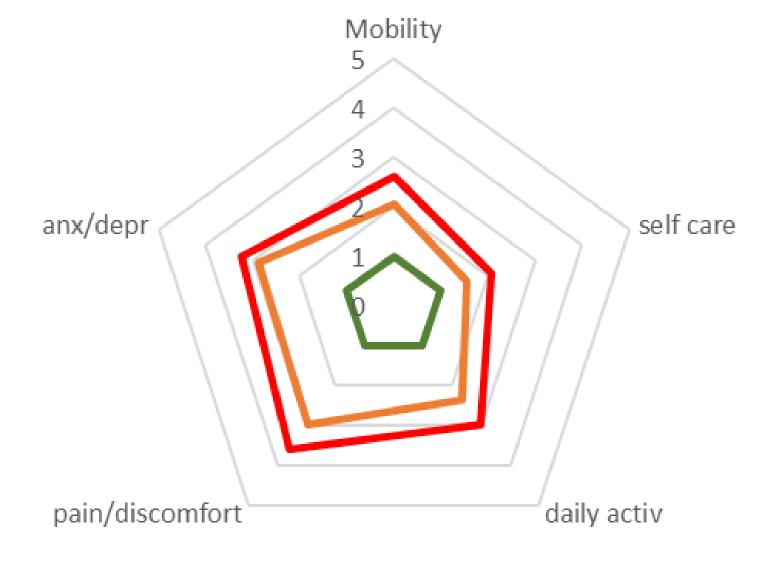

### I have appropriate access to professional psychologic support:

One out of 2
lupus patients
faces depression
or anxiety, but it
is under treated
(2)

Lupus significantly affects quality of life

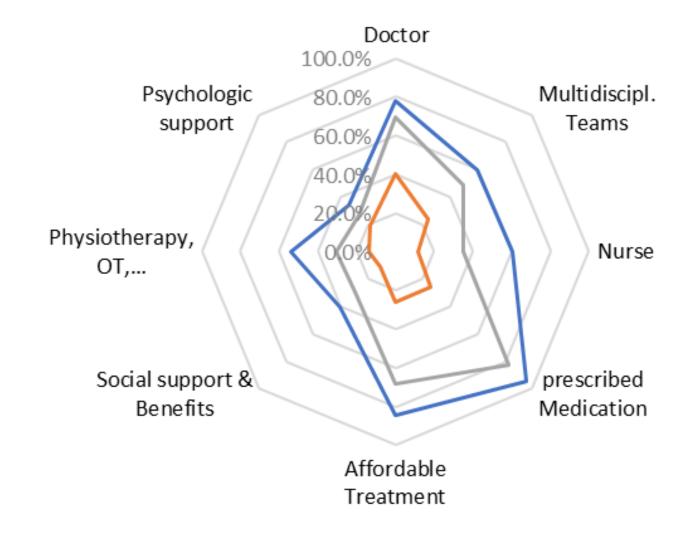

Reference: fully healthy person, no HRQoL (EQ5D) limitations at all

Average – lupus under control (n=2980)

Average – lupus NOT under control (n=1166)

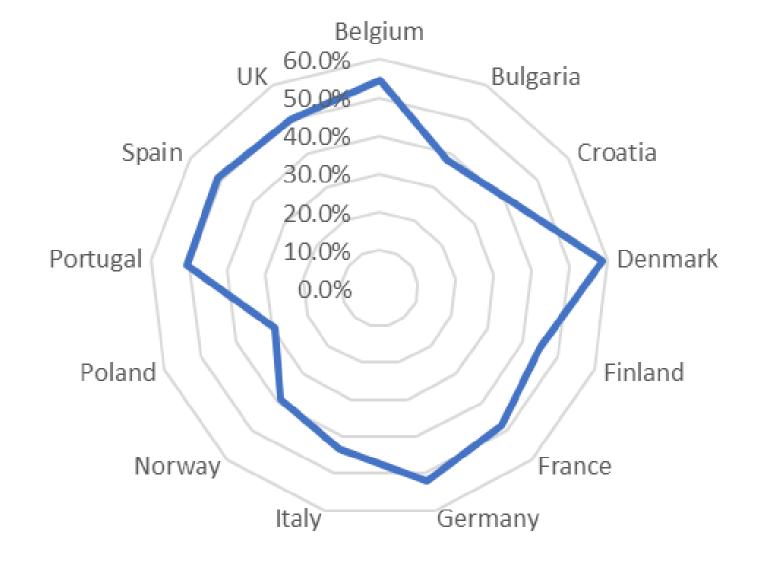

Access is substantially lagging in 5 out of 8 domains

Worst, average and best countries by access domain

Access inequalities are big in Europe

Average access across 8 domains, by country
